

PSP2 Design Review Checklist

Student	Bridget Mendez Arano	Date	14/02/2025
Program	Distribucion t	Program #	5
Instructor	Dr. Adolfo Centeno	Language	Java

Purpose	To guide you in conducting an effective design review
General	- Review the entire program for each checklist category; do not attempt to review for more than one category at a time! - As you complete each review step, check off that item in the box at the right. - Complete the checklist for one program or program unit before reviewing the next.

Complete	Verify that the design covers all of the applicable requirements. - All specified outputs are produced. - All needed inputs are furnished. - All required includes are stated.	X			
External Limits	Where the design assumes or relies upon external limits, determine if behavior is correct at nominal values, at limits, and beyond limits.	X			
Logic	- Verify that program sequencing is proper. Stacks, lists, and so on are in the proper order. Recursion unwinds properly. - Verify that all loops are properly initiated, incremented, and terminated. - Examine each conditional statement and verify all cases.	X			
Internal Limits	Where the design assumes or relies upon internal limits, determine if behavior is correct at nominal values, at limits, and beyond limits.	X			
Special Cases	- Check all special cases. - Ensure proper operation with empty, full, minimum, maximum, negative, and zero values for all variables. - Protect against out-of-limits, overflow, and underflow conditions. - Ensure “impossible” conditions are absolutely impossible. - Handle all possible incorrect or error conditions.	X			
Functional Use	- Verify that all functions, procedures, or methods are fully understood and properly used. - Verify that all externally referenced abstractions are precisely defined.	X			
System Considerations	- Verify that the program does not cause system limits to be exceeded. - Verify that all security-sensitive data are from trusted sources. - Verify that all safety conditions conform to the safety specifications.	X			
Names	Verify that - all special names are clear, defined, and authenticated - the scopes of all variables and parameters are self-evident or defined - all named items are used within their declared scopes	X			
Standards	Ensure that the design conforms to all applicable design standards.	X
